

Changes done: Desktop view:

1. The layout of the sections with images except the introduction section is changed so that the content and the image are side by side in 3 rows.
 - The user receives a better presentation of the information. Therefore, he receives a clean feeling.
2. Hovering effect to the nav bar links.
 - Gives a better user experience where the user can clearly see which button he is referring to.
3. The Contact us Button is centred and the Value of the content of the button is changed. also a hover effect is added to the button.
 - This emphasises the button since it is really important.
 - The hover effect gives a better user experience.
4. All the images are changed to take 100% width of their parent container.
 - This allows the user to view different images in different sizes depending on their relevance.

Changes made: Tablet view;

1. The layout is kept as a column.
 - This makes the web page more readable, thus satisfying user stories.
 - The layout of the Mobile view is preserved here.
2. Nav bar links are spaced apart.
 - This prevents unwanted redirects from occurring.
3. The intro image is given a width of 100% but the others are kept at 50% of the parent container.
 - This prevents images becoming too large.
4. The contact us button is centred
 - Same as the desktop view, this is done to highlight the importance of that button.

Changes made: Mobile view:

1. The layout is kept as a column and all the images are changed to have a width of 100% of the parent container.
 - This gives the user the chance to better view all the information and the images without having to zoom in.
2. The nav bar is hidden and a hamburger button is introduced.
 - This prevents the unwanted cluttering of clickables in the nav bar and provides the user with a better experience.
3. The contact us button is centred.
 - Emphasises the importance of that piece of information.
